PRODUCT OVERVIEW

Epta

Condensing Air system is an alternative to traditional centralized/remote supermarket refrigeration systems operating with racks of multiple compressors and other components installed in the basement.

Major advantages of Integral system compared to remote solution:

Environmental friendly /
F Gas compliant

Lower installation
and maintenance costs

Less piping work /
faster connection

Lower total gas charge
up to -80% on a
complete store
comparison

Reduced completely the
leakage thanks to the
"Eremital sealed circuit
in the factory"

Faster store set-up

Lower power
requirement and
operating costs

Lower refrigerant charge
per unit

Reduced carbon footprint

Easy components
replacement

Easy integration with
store heat recovery
systems

One loop only for both
medium and low
temperature display
cases

GranVista Integral

PRODUCT OVERVIEW

Overview | Product at a glance

Epta Integral is a full integrated Air solution on GranVista vertical cabinet.

Epta Integral is powered by a compressor using R-290 (propane) low GWP refrigerant complies to F-Gas GWP reduction.

This new version has been designed to reach high efficiency energy consumption performance and in the meantime to make installation and start up easier.

Epta Integral offers a flexible range of user friendly cabinets with enhanced modularity adapted to all stores configurations from to convenience and small stores.

GranVista Integral Air one New single design with two different aesthetics:

New Aesthetics

First in class cabinet Advance:

- Frameless doors
- Antibacterial handle
- Advance lighting
- Customizable aesthetic

Value Cabinet:

- Value doors
- Value lighting
- Customizable aesthetic

Main features:

- Eco friendly natural refrigerant R290
- High efficiency condenser
- Smart communicating control
- All the structure in the basement
- Integral uses a smart communicating digital controller dedicated for self contained units with fix compressors.

PRODUCT OVERVIEW

Overview | Main features

R-290 natural refrigerant

Since years Epta has developed full line of self contain unit compatible and optimized for R-290.

In terms of achieving regulatory compliance, R-290 is very appealing. Its global warming potential (GWP = 3) is well below F-GAS the global threshold of 150 GWP, which places it in an elite class of refrigerants from the standpoint of minimal environmental impact qualifying it as an essential technical solution for a long term perspectives.

R-290 has tremendous potential in commercial refrigeration thanks to its eco-friendly, highly efficient and high-performing characteristics.

With a restricted maximum charge of 150 grams per refrigeration circuit, R-290 is a safe and viable natural alternative to HFC performing as well for positive and negative applications.
