1. INTRODUZIONE

FR

1.1 Introduzione

EN

Il documento "Cleaning Instructions" indica come pulire il banco refrigerato. Contiene inoltre informazioni su come tutelare l'incolumità degli addetti alle pulizie.

DE

ES

Le istruzioni d'uso sono disponibili anche su:
www.eptarefrigeration.com.

PT

1.2 Informazioni generali di sicurezza

Non interrompere la catena del freddo dei prodotti esposti.

Prima di qualsiasi operazione di manutenzione e pulizia, disconnettere il banco dalla rete elettrica ed assicurarsi che il personale non autorizzato possa riconnettere l'alimentazione elettrica.

Assicurarsi che la zona di lavoro sia sufficientemente illuminata durante le operazioni di pulizia e manutenzione. Utilizzare ulteriori fonti di illuminazione se necessario.

Le porte e le pareti in vetro sono dotate all'interno di una pellicola antiappannamento. Non utilizzare detergenti contenenti sostanze abrasive, fortemente acide o caustiche.

Fare attenzione a non toccare parti in rotazione del banco (ventolatori) con le dita, asciugamani o altri strumenti.

Non rimuovere le protezioni e le coperture di protezione.

1.3 Motivi per la pulizia

Per presentare le merci in modo attraente e igienico, è importante pulire regolarmente il banco. Una pulizia regolare impedisce inoltre che muffe e batteri nocivi si depositino nel banco, poiché la polvere umida fornisce un terreno fertile ideale.

La pulizia regolare è essenziale anche per la funzione tecnica. Questo è l'unico modo per garantire uno scambio termico ottimale e che l'aria possa fluire facilmente nel banco.

Cleaning instruction

1. INTRODUCTION

1.1 Périmètre

Le document « Cleaning instruction » indique comment nettoyer un meuble frigorifique de vente pour aliments.
Il contient également des informations sur la manière de protéger la sécurité des personnes chargées du nettoyage.

Ces instructions sont aussi disponibles sur : www.eptarefrigeration.com.

1.2 Informations générales de Sécurité

Ne jamais interrompre la chaîne du froid des denrées exposées !

Avant d'entreprendre toute opération d'entretien ou de nettoyage, débrancher l'appareil de l'alimentation électrique et le protéger contre tout branchement par des personnes non autorisées.

S'assurer que la zone de travail est suffisamment éclairée pendant les activités de maintenance et de nettoyage et utiliser une source d'éclairage supplémentaire si nécessaire.

Les portes et les parois vitrées sont pourvues d'un film intérieur antibuée. Ne pas utiliser de détergent contenant des substances abrasives, fortement acides ou caustiques.

Attention à ne pas toucher les pièces en rotation du meuble (ventilateurs) avec les doigts, des serviettes ou d'autres outils.

Ne pas retirer les protections ni les couvercles.

1.3 Pourquoi nettoyer

Afin de présenter les produits et denrées de façon attrayante et hygiénique, il est important de nettoyer régulièrement le meuble réfrigéré. Un nettoyage régulier empêche également les moisissures et les bactéries nocives de s'installer dans le meuble, car la poussière humide constitue un terrain de reproduction idéal.

Un nettoyage régulier est également essentiel pour le bon fonctionnement technique. C'est le seul moyen de garantir un échange thermique optimal et une bonne circulation de l'air dans le meuble.

2. PRODUITS DE NETTOYAGE

Vêtements de travail

- Gants de protection
- Vêtements de protection
- Lunettes de protection

Produits de nettoyage pour surfaces autres que vitrées

- Eau
- Détergent doux
- Éponges, chiffons et chiffons doux, non abrasifs

Produits de nettoyage pour surfaces vitrées

- Eau
- Détergent doux
- Nettoyant à vitres standard
- Détachants pour taches d'huile
- Éponges, chiffons et serviettes en papier, non abrasifs.

Ne pas utiliser ce qui suit

- Produits de nettoyage fortement corrosifs
- Produits de nettoyage acides ou caustiques
- Produits inflammables
- Acétone
- Produits de nettoyage contenant des solvants
- Nettoyants abrasifs
- Nettoyant haute pression ou autre jet d'eau puissant pour nettoyer

Cleaning instruction

3. NETTOYAGE DU MEUBLE

3.1 Nettoyage des parties extérieures du meuble frigorifique de vente

- Nettoyer les surfaces extérieures de la vitrine avec un savon doux ou un détergent dans de l'eau tiède uniquement.
- Essuyer soigneusement avec des éponges, des chiffons et des chiffons doux, non abrasifs.

Vente assistée : option

3.2 Nettoyage de l'intérieur du meuble (comptoir à poisson)

Nettoyage quotidien.

- Chaque jour, retirez tous les poissons et stockez le produit dans une chambre froide.
- Ne pas interrompre la chaîne du froid.
- Éteignez le meuble.

- Enlevez toute la glace avec une pelle et faites-la fondre dans un évier.
- Retirez les plateaux à poisson et nettoyez-les à l'extérieur du meuble.

1. INTRODUCTION

1.1 Scope

The document "Cleaning Instructions" indicates how to clean the cabinet.
It also contains information how to protect the safety of the persons in charge of cleaning.

Instructions for use are also available on:
www.eptarefrigeration.com.

1.2 General safety information

Do never interrupt the cooling chain of displayed goods.

Before starting any maintenance or cleaning, disconnect the equipment from the electrical power supply and secure against re-connecting by unauthorized persons.

Ensure that the working area is sufficiently illuminated during maintenance and cleaning activities and use an additional lighting source if necessary.

Doors and glass walls are provided with an antifog liner film inside. Do not use any detergent containing abrasive, strongly acidic or caustic substances.

Beware of touching any rotation part of the cabinet (fans) with fingers, towels or other tools.

Do not remove any protective guards and covers.

1.3 Reasons for cleaning

In order to present goods attractively and hygienically, it is important to clean the freezer cabinet regularly. Regular cleaning also prevents mould and harmful bacteria from settling in the furniture, as damp dust provides an ideal breeding ground.

Regular cleaning is also essential for the technical function. This is the only way to ensure that an optimal heat exchange takes place and that air can flow easily in the cabinet.

2. CLEANING AGENTS

Work clothes

- Protective gloves
- Protective clothing
- Safety glasses

Cleaning agent for surfaces other than glass

- Water
- Mild detergent
- Non-scratching sponges, rags and soft cloths

Cleaning agent for glass surfaces

- Water
- Mild detergent
- Standard glass cleaner
- Oil stain removers
- Non-scratching sponges, rags and paper towels

The following must not be used

- Strong corrosive cleaning agents
- Acidic or caustic cleaning agents
- Inflammable agents
- Acetone
- Solvent containing cleaning agents
- Abrasive cleaners
- Jet-wash cleaner or other strong water jet to clean

- Fill the trays with ice flakes using a shovel.
- Put the unpackaged fish inside the cabinet above the ice.

3.4 Cabinet restart

- After completing the cleaning and attentively checking that the inside of the cabinet is completely dry, put the appliance back into operation by reconnecting power to the cabinet.
- The cabinet will then start its cooling cycle. Allow cabinets to reach a displayed temperature of 0/-1°C before reloading the removed goods.

Cleaning instruction

1. EINFÜHRUNG

1.1 Der Zweck dieses Dokuments

Das Dokument "Cleaning instruction" enthält Informationen zur Reinigung des Kühlmöbels. Es enthält auch Informationen, wie die Sicherheit der mit der Reinigung beauftragten Personen gewährleistet werden kann.

Die Bedienungsanleitung ist auch unter verfügbar: www.eptarefrigeration.com.

1.2 Allgemeine Sicherheitshinweise

Die Kühlkette der gekühlten Waren darf keinesfalls unterbrochen werden.

Trennen Sie das Gerät vom Stromnetz, bevor Sie Wartungs- oder Reinigungsarbeiten durchführen und stellen Sie sicher, dass die Stromzufuhr keinesfalls durch unbefugte Personen wieder eingeschaltet wird.

Stellen Sie sicher, dass der Arbeitsbereich während der Wartungs- und Reinigungsarbeiten ausreichend beleuchtet ist, und schalten Sie, falls erforderlich, eine zusätzliche Lichtquelle ein.

Die Türen und Glaswände sind von innen mit einer Antibeschlagfolie ausgerüstet. Verwenden Sie keine Scheuermittel oder Reinigungsmittel, die stark säurehaltige oder ätzende Substanzen enthalten.

Achten Sie darauf, mit den Fingern, Handtüchern oder anderen Werkzeugen keine rotierenden Geräteteile (Lüfter) zu berühren.

Entfernen Sie keine Schutzvorrichtungen oder Abdeckungen.

1.3 Gründe für eine Reinigung

Damit die Waren auf attraktive und hygienische Weise präsentiert werden, ist eine regelmäßige Reinigung des Kühlmöbels unverzichtbar. Eine regelmäßige Reinigung verhindert außerdem, dass sich Schimmel und schädliche Bakterien auf den Oberflächen ansiedeln, denn für sie bietet feuchter Staub einen idealen Nährboden.

Auch für den reibungslosen Betrieb der technischen Komponenten ist eine regelmäßige Reinigung entscheidend, denn nur dann ist gewährleistet, dass ein optimaler Wärmeaustausch stattfindet und die Luft im Kühlmöbel ungehindert zirkulieren kann.

2. REINIGUNGSMITTEL

Arbeitskleidung

- Schutzhandschuhe
- Schutzkleidung
- Schutzbrille

Reinigungsmittel für andere Oberflächen als Glas

- Wasser
- Mildes Reinigungsmittel
- Weiche Schwämme, Lappen und Tücher
(ohne raue Oberflächen)

Reinigungsmittel für Glasflächen

- Wasser
- Mildes Reinigungsmittel
- Handelsübliche Glasreiniger
- Ölfleckenentferner
- Weiche Schwämme, Lappen (ohne raue
Oberflächen) und Papiertücher

Die folgenden Mittel dürfen nicht eingesetzt werden:

- Stark korrosionsfördernde
Reinigungsmittel
- Säurehaltige oder ätzende
Reinigungsmittel
- Entflammbare Stoffe
- Azeton
- Lösungsmittelhaltige Reinigungsmittel
- Scheuermittel
- Hochdruckreiniger oder ein anderer
starker Wasserstrahl zur Reinigung

Cleaning instruction

3. REINIGUNG DER KÜHLMÖBEL

3.1 Reinigung der Außenflächen der Kühlmöbel

- Geben Sie für die Reinigung der Außenflächen der Kühlmöbel etwas Seife oder Reinigungsmittel in lauwarmes Wasser.
- Wischen Sie die Oberflächen vorsichtig ab, verwenden Sie dafür einen Schwamm oder Lappen ohne raue Oberfläche bzw. ein weiches Tuch.

Serve-over: Option

Abb. 1

3.2 Reinigen der Innenseite des kühlmöbels (Fischtheke)

Tägliche Reinigung,

- Entfernen Sie jeden Tag alle Fische und lagern Sie das Produkt in einem kalten Raum.
- Vermeiden Sie eine Unterbrechung der Kühlkette.
- Schalten Sie den kühlmöbels.

Abb. 3

- Entfernen Sie das gesamte Eis mit einer Schaufel und schmelzen Sie es in einem Waschbecken.
- Nehmen Sie die Fischschalen heraus und reinigen Sie sie an der Außenseite des kühlmöbels.

- Setzen Sie die Lüftungsgitter wieder ein

3.3 Vorbereitung des Kühlmöbels.

- Kippen Sie kein Eis aus den Schalen in die Theke und lassen Sie nicht zu, dass das gesamte Eis in der Theke schmilzt.

Installieren Sie das Fischtablett in der Theke und achten Sie auf Folgendes:

- 1) Das Fischtablett ist nach vorne geneigt.
- 2) Unter dem Tablett befindet sich keine Anzeigeplatte.
- 3) Legen Sie Eis in die Schalen.
- 4) Achten Sie darauf, dass Sie nicht zu viel Eis hineingeben.
- 5) Das Eis darf das Luftauslassgitter nicht bedecken.

Modello - Modèle - Model Modell - Modelo - Modelo	VELVET N FISH	COSTAN  eptarefrigeration

Cleaning instruction

1. INTRODUCCIÓN

1.1 Alcance

El documento "Instrucciones de limpieza" indica cómo limpiar la vitrina refrigerada. También contiene información sobre cómo proteger la seguridad de las personas a cargo de la limpieza.

Las instrucciones de uso también están disponibles en:
www.eptarefrigeration.com.

1.2 Información general de seguridad

No interrumpa nunca la cadena de refrigeración de los productos expuestos.

Antes de iniciar cualquier mantenimiento o limpieza, desconecte el equipo de la fuente de alimentación eléctrica y asegúrelo contra la reconexión por parte de personas no autorizadas.

Asegúrese de que el área de trabajo esté suficientemente iluminada durante las actividades de mantenimiento y limpieza y utilice una fuente de iluminación adicional si es necesario.

Las puertas y las paredes de vidrio están provistas de una película de revestimiento antivaho en el interior. No utilice ningún detergente que contenga sustancias abrasivas, fuertemente ácidas o cáusticas.

Tenga cuidado de tocar cualquier parte giratoria del gabinete (ventiladores) con los dedos, toallas u otras herramientas.

No retire ninguna protección ni cubierta.

1.3 Razones para limpiar

Para presentar los productos de forma atractiva e higiénica, es importante limpiar el armario del congelador con regularidad. La limpieza regular también evita que el moho y las bacterias dañinas se asienten en los muebles, ya que el polvo húmedo proporciona un caldo de cultivo ideal.

La limpieza regular también es esencial para la función técnica. Esta es la única forma de garantizar que se produzca un intercambio de calor óptimo y que el aire pueda fluir fácilmente en el armario.

Cleaning instruction

1. INTRODUÇÃO

1.1 Alcance

O documento "Instruções de limpeza" indica como limpar a vitrine refrigerada. Ele também contém informações sobre como proteger a segurança das pessoas encarregadas da limpeza.

As instruções de uso também estão disponíveis em:
www.eptarefrigeration.com.

1.2 Informações gerais de segurança

Nunca interrompa a cadeia de refrigeração dos produtos expostos.

Antes de iniciar qualquer manutenção ou limpeza, desconecte o equipamento da rede elétrica e proteja-o contra religação por pessoas não autorizadas.

Certifique-se de que a área de trabalho esteja suficientemente iluminada durante as atividades de manutenção e limpeza e use uma fonte de iluminação adicional, se necessário.

As portas e paredes de vidro são fornecidas com uma película anti-embaciamento no interior. Não use nenhum detergente que contenha substâncias abrasivas, fortemente ácidas ou cáusticas.

Cuidado ao tocar em qualquer parte rotativa do gabinete (ventiladores) com os dedos, toalhas ou outras ferramentas.

Não remova quaisquer proteções e tampas de proteção.

1.3 Motivos da limpeza

Para apresentar os produtos de forma atrativa e higiênica, é importante limpar regularmente o gabinete do freezer. A limpeza regular também evita que o mofo e as bactérias nocivas se instalem nos móveis, pois a poeira úmida é um terreno fértil ideal.

A limpeza regular também é essencial para a função técnica. Esta é a única maneira de garantir que ocorra uma troca de calor ideal e que o ar possa fluir facilmente no gabinete.

- Reinstale a grade de retorno de ar.

3.3 Preparação do gabinete.

- Não jogue gelo das bandejas no gabinete nem deixe todo o gelo dentro do balcão derreter.

Instale a bandeja de peixes dentro do balcão e preste atenção em:

- 1) Tendo a bandeja de peixes inclinada para a frente.
- 2) Não há placa de exibição sob a bandeja.
- 3) Coloque gelo nas bandejas.
- 4) Tenha cuidado para não sobrecarregar com gelo.
- 5) O gelo não deve cobrir a grelha de saída de ar.

- Encha as bandejas com gelo em flocos usando uma pá.
- Coloque o peixe não embalado dentro do armário em cima do gelo.

3.4 Reinício do gabinete

- Após concluir a limpeza e verificar atentamente se o interior do gabinete está completamente seco, coloque o aparelho novamente em operação, reconectando a energia ao gabinete.
- O gabinete iniciará então seu ciclo de resfriamento. Permita que os gabinetes atinjam uma temperatura exibida de 0/-1°C antes de recarregar as mercadorias removidas.
